PROJECT PROPOSAL

Inventory-Based Invoicing, Dispatch & Quotation System

A web-based sales and inventory platform for E&G Engineering Ltd. (EGEL)

Prepared for E&G Engineering Ltd. **Prepared by** [Your Company] **Currency** BDT

Deployment Web (office PC)

Draft v1 · for validation with the client

EXECUTIVE SUMMARY

Problem statement

E&G Engineering Ltd. (EGEL) sells a broad range of engineering products and services — diesel gensets, compressors, solar installations, substation EPC and after-sales servicing — but has no central system to hold that catalogue, assign consistent part numbers, or produce sales documents.

Quotations, invoices and dispatch notes are prepared by hand. This makes pricing inconsistent between staff, stock levels hard to know at any moment, and document turnaround slower than the business needs. It also leaves EGEL without a reliable record of what was quoted, sold, or dispatched — a gap that grows more costly as the business scales.

Solution outline

We propose a web-based inventory, invoicing and quotation system that gives EGEL a single source of truth for everything it sells. Staff select items from one master catalogue, enter quantities, and produce clean, numbered documents in seconds. The system will let EGEL:

- Maintain one master catalogue of products and services, each with a unique part number, category, unit and price.
- Manage customers centrally and reuse them across quotations, invoices and dispatch notes.
- Build quotations with line- or total-level discounts, VAT, shipping and other charges — showing the customer selling prices only.
- Generate priced **invoices** and unpriced **dispatch notes** from selected items and quantities.

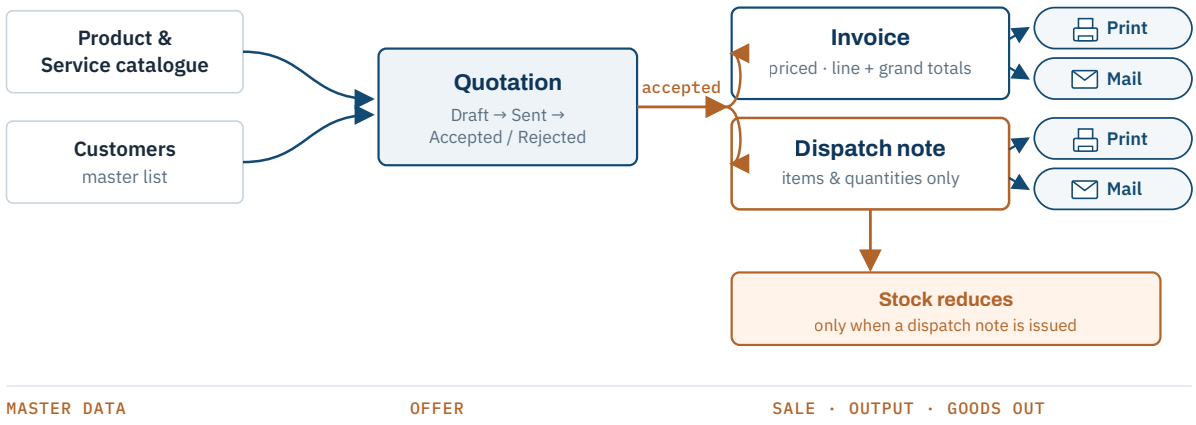

- Track stock in real time, with low-stock and out-of-stock warnings.
- Print branded A4 documents directly from the office PC, and optionally keep a PDF copy.
- Grow later into a fuller ERP with payments, additional roles and richer reporting.

SCOPE OF WORK

The system is organised into the functional modules below. Each module states what the relevant role can do, and calls out the corner cases that keep day-to-day use robust. Behaviour the business team flagged as an assumption has been proposed here as a sensible default; the genuine decisions still needing EGEL's confirmation are gathered in **Points to Confirm** at the end, so answers can be slotted in without rewriting this document.

HOW THE DOCUMENTS CONNECT

Sales document lifecycle

A quotation captures an offer. Once the customer accepts, it converts in one click into an **invoice** (the priced record of the sale) and a **dispatch note** (the goods-out record), carrying items, quantities, prices and charges across. Each of these can be **printed** or **emailed** to the customer, and stock is reduced only when the dispatch note is issued.

01 Authentication & Access Control

Admin

- Log in securely with a username and password.
- Reset a forgotten password through a recovery link.
- Access the full catalogue, customers, quotations, invoicing and stock records.

CORNER CASES & ADDITIONS

- Automatic sign-out after a period of inactivity, so an unattended office PC stays secure.
- An audit trail records who created, edited or voided each document, and every stock change — essential for financial and inventory accuracy.
- Supports multiple user accounts, with the role structure defined in module 09.

02 Product & Inventory Master

The single master list that every quotation, invoice and dispatch note draws from.

Admin

- Add, edit or deactivate a product or service.
- Assign each item a unique **part number** (auto-suggested by category, still editable), category, unit and price.
- Record both a **buying price** and a **selling price** — only the selling price ever appears on customer documents.
- Mark each item as a **Product** (stock-tracked) or a **Service** (no stock tracking).
- Set an optional low-stock threshold per product.

CORNER CASES & ADDITIONS

- Items are deactivated, never permanently deleted, so historical documents keep their references intact.
- Bulk import of the initial catalogue from a spreadsheet, to avoid manual entry at launch.
- Fast search and filtering by part number, name or category.

Reference catalogue structure — test data, to be replaced with EGEL's confirmed items and BDT prices.

Category	Coverage
Diesel Gensets	DEUTZ, PERKINS, VOLVO, CUMMINS, MTU, MITSUBISHI ranges; canopies and alternators
Compressors	Oil-injected screw, oil-free screw, reciprocating, portable screw
Spare Parts & Service	Fast/slow-moving spares; installation, maintenance, overhaul and calibration jobs
Synchronization & Automation	SmartGen, EasyGen, Deep Sea controllers; sync and load-management systems
Solar Power	Off-grid, on-grid, hybrid, home, mini-grid, irrigation and street-light systems
Substation EPC	Transformers, switchgear, protection panels, distribution boards
Substation Erection & Testing	Commissioning and erection services by equipment type

03 Customer Management

Admin

- Add, edit or remove customers from the admin panel.
- Hold name, billing address, contact person, phone, email and (optional) VAT/BIN.
- Record one or more **project sites** per customer, since the delivery site often differs from the billing address (as on your dispatch notes).
- Select a customer from the list when creating any quotation, invoice or dispatch note; the job header (Work Ref, PO No/Date, Job Ref) is captured on the document itself.

CORNER CASES & ADDITIONS

- Free-text customer entry stays available for one-off buyers, so no record is forced.
- Each customer shows a history of their past documents in one place.

04 Quotation Management

Build a professional offer, control the pricing, and convert it straight into a sale.

Admin

- Create a quotation and select a customer from the list.
- Add products and services from their respective lists.
- Apply a **discount** as a percentage or a fixed amount, line by line or on the whole document.
- Add document charges — **VAT (%)**, **service charge**, **weight charge** and **delivery charge**; the final amount is calculated automatically (see the pricing model below).
- Show selling prices only — buying prices are never displayed or printed.
- Set a validity / expiry date for the offer.

CORNER CASES & ADDITIONS

- Quotation status tracked through **Draft → Sent → Accepted / Rejected / Expired**.
- Revisions are versioned (Rev 1, Rev 2 …) so the negotiation history is preserved.
- An accepted quotation converts in one click into an invoice and dispatch note, carrying all items, quantities, prices and charges across.

05

Invoice & Dispatch Generation

Layouts and conventions below are matched to EGEL's current invoice and dispatch templates (samples 709, 817 & 819).

Admin

- Browse or search the catalogue and add one or more items, each with a quantity.
- Generate either an **Invoice** (unit prices, line totals, sub-total, VAT and grand total) or a **Dispatch Note** (items and quantities only, no pricing).
- Select a customer, and capture the job header: **Work Ref**, **Project Site**, **PO No & PO Date**, **Job Ref** and document date.
- Add per-line **Remarks** (e.g. "Cummins DG") and a unit of measure (Pcs, Job ...).
- Apply **discount** (% or amount, per line or on the total), **VAT (%)**, **service charge**, **weight charge** and **delivery charge** — totalled automatically.
- Print, and optionally save a PDF copy.

MATCHED TO YOUR CURRENT DOCUMENTS

- **Numbering** follows your existing format `EGEL/Invoice/2026/819`, `EGEL/Dispatch/2026/709` — a **single running sequence shared across document types** (your samples run 709 → 813 → 817 → 819 across both), with the type as a label. Numbers are never reused, even if a draft is discarded.
- An invoice can cite the **Dispatch No** it bills against (as invoice 819 references dispatch 813), linking the two records.
- Totals block prints as **Sub-Total → Add VAT (x%) → Grand Total**; the VAT line is optional and omitted when it doesn't apply.
- Grand total also printed in words — "In Word: BDT ... Only" — and each document ends with **Prepared By / Received By** signature lines.
- Dates shown as **DD.MM.YYYY**, amounts in **TK/BDT**.
- Documents can be saved as **Draft**; a finalised invoice is **voided** (kept on record) and reissued rather than edited in place, so the sequence and audit trail stay intact.

Document anatomy — fields carried on each document, from EGEL's templates.

Field / section	Invoice	Dispatch note
Customer name & billing address	Yes	Yes
Contact person & phone	Yes	Yes
Project site	Yes	Yes
Work Ref (job description)	Yes	Yes
Document No & date	Yes	Yes
PO No & PO Date	Yes	Yes
Job Ref (internal)	Yes	Yes
Linked Dispatch No	Yes	—
Line: SL, description (incl. P/N), UoM, Qty	Yes	Yes
Line: Remarks	Yes	—
Line: Unit Price & Total Price	Yes	—
Sub-Total → VAT (%) → Grand Total	Yes	—
Amount in words	Yes	—
Prepared By / Received By	Yes	Yes

PRICING & CHARGES

Pricing model

Every product and service holds a buying and a selling price; discounts and additional charges are applied when a quotation or invoice is built. Buying price is used only for EGEL's internal margin — it never appears on a customer document.

Field	Applies at	On customer document
Buying price	Item (product / service)	No — internal only
Selling price	Item (product / service)	Yes
Discount %	Per line and / or whole document	Yes
Discount amount	Per line and / or whole document	Yes
VAT (%)	Document total	Yes
Service charge	Document total	Yes
Weight charge	Document total	Yes
Delivery charge	Document total	Yes

HOW A TOTAL IS BUILT

×	Quantity × selling price → line amount
−	Line discount (% or amount) → line net
=	**Sub-total (sum of all line nets)**
−	Document discount (% or amount)
+	Service charge, weight charge, delivery charge
+	VAT (%)
=	**Grand total — printed in figures and in words**

The VAT base and the position of the extra charges relative to VAT can be set to match EGEL's accounting practice (see Q7).

06 Stock Management

Admin

- View current stock for every product.
- Manually adjust stock (e.g. after a delivery), with a reason or reference recorded.
- See a warning when a requested quantity exceeds available stock.

CORNER CASES & ADDITIONS

- Stock reduces automatically when a **dispatch note** is issued — never at quotation or invoice stage.
- The system can either block issuing, or warn and allow it, when stock is short — needed for made-to-order items (see Q3).
- A stock-movement ledger records every increase and decrease against its source document.

07 Printing & Document Output

Admin

- Print A4 invoices and dispatch notes directly to a printer connected to the office PC.
- Output reproduces EGEL's current template — logo / letterhead, two-column job header, line-item table, totals block and **Prepared By / Received By** signature lines.
- An optional fixed footer (bank details, terms) can be added — see Q2.
- Optionally auto-save a PDF copy of every printed document.

ASSUMPTION APPLIED

- The first version targets desktop printing only; no mobile or tablet printing is included, matching the confirmed office-PC use case.

08 Reporting & Insights

Lightweight in the first version, built to expand as EGEL grows.

Admin

- List past quotations, invoices and dispatch notes, filtered by date and customer.
- See low-stock items at a glance.
- Sales by item and by customer (proposed — see Q5).

09 User Roles & Access Levels

EGEL starts with a single Admin role; a limited Sales Staff role is designed in for Phase 2.

Capability	Admin	Sales Staff Phase 2
Manage catalogue & edit prices	Yes	—
Manage customers	Yes	—
Create quotations	Yes	Yes
Create invoices & dispatch notes	Yes	Yes
Adjust stock	Yes	—
Print documents	Yes	Yes
View reports	Yes	Limited
Manage users	Yes	—

SUGGESTED DELIVERY APPROACH

Delivering in two phases lets EGEL start using the core system quickly, then expand toward a fuller ERP once the essentials are proven in daily use.

PHASE 1 · CORE

Sell, dispatch & track

- Authentication & audit trail
- Product / service catalogue
- Customer management
- Quotations, invoices & dispatch notes
- Real-time stock with warnings
- Branded A4 printing & PDF
- Basic document & low-stock lists

PHASE 2 · ERP EXPANSION

Scale the business

- Sales Staff role & finer permissions
- Payments & receivables tracking
- Purchase orders & goods receipts
- Richer sales & inventory reporting
- Customer statements
- Multi-user activity dashboards

POINTS TO CONFIRM WITH THE CLIENT

Each item below shows the default we have assumed so the build can proceed; EGEL's answer simply confirms or changes it.

Q1 **Users & roles.** Will more than one staff member use the system, and is the Phase-2 Sales Staff role (create documents but not edit prices) wanted?

Default assumed: **single Admin user in Phase 1**.

Q2 **Branding.** Please provide EGEL's logo / letterhead and any fixed footer text (bank details, terms) for printed documents.

Default assumed: **logo + footer with bank details and standard terms**.

Q3 **Stock control.** When stock is insufficient, should the system **block** the document or **warn and allow** it (for made-to-order items)?

Default assumed: **warn and allow**.

Q4 **PDF archive.** Should a PDF copy be saved automatically for every printed document?

Default assumed: **yes, auto-saved**.

Q5 **Document numbering.** Your samples use one running number shared across invoices and dispatches (709 → 813 → 817 → 819). Should quotations share this same sequence too, or run their own?

Default assumed: **one shared sequence across all document types**, matching current practice.

Q6 **Reporting.** Is basic reporting (sales by item, low-stock list) needed in the first version, or can it follow in Phase 2?

Default assumed: **lists + low-stock in Phase 1; analytics in Phase 2**.

Q7 **VAT & charge order.** Your sample invoices apply a single VAT % on the sub-total (e.g. 10%), with the line omitted when it doesn't apply. Should service, weight and delivery charges be added **before** or **after** VAT is calculated?

Confirmed by samples: **single VAT % per document**. Default assumed: **charges added before VAT**.

Q8 **Pricing data.** Please confirm EGEL's real catalogue items and BDT prices — the reference list in this document is placeholder test data.

Default assumed: **placeholder catalogue replaced before launch**.
